SINGLE-UNIVERSE WIRELESS DMX RECEIVER — TIMOTWO

SKT RX TIMOTWO

The current-generation receiver: TimoTwo radio, BLE app configuration, optional battery.

The SKT RX TimoTwo is the current-generation receiver, built on the same LumenRadio TimoTwo module as our transmitters. It receives a full CRMX universe with extended range and faster data transfer than the classic chip, and its Bluetooth LE radio means you configure it from your phone with the CRMX Toolbox app — no button dance required. Available with an optional built-in battery for untethered positions.

512 ch | TimoTwo | BLE app config | Optional battery

FEATURES

- Receives a full 512-channel DMX universe over LumenRadio CRMX
- LumenRadio TimoTwo radio — 2.4 GHz with Bluetooth Low Energy
- Configure over BLE with LumenRadio's CRMX Toolbox app (Linking Key, Universe Color)
- Extended range and faster data transfer than classic CRMX silicon
- Optional built-in battery for untethered operation
- Runs from 5–30 V DC — USB power bank, battery, or rig power
